

The ultimate solution to frictionless business device management

Deploying and managing a bulk of enterprise devices has long been a painful thorn for enterprises, as traditional methods of mobile device configuration and enrollment involve tedious manual procedures that are time-consuming and risky.

Samsung KNOX is a combination of platform level security safeguards that are built into Samsung mobile devices, which is ideal for the business-to-business environment. Its new KNOX Configure and KNOX Mobile Enrollment support high and medium-tier Samsung smartphones and tablets, and offer a comprehensive solution that eliminates conundrums such as the long time spent enrolling all mobile devices to Mobile Device Management (MDM) manually. Knox Configure and Knox Mobile Enrollment facilitate proper device deployment, thus eliminating risk should the devices be stolen or reset.

KNOX Configure allows zero-touch provisioning, reduces the use of resources, and is applicable to most enterprises, especially retail chains, hotels, security firms and companies fielding large numbers of employees with smartphones and tablets. KNOX Configure can adjust a device's enterprise settings swiftly via the cloud and customize on-the-shelf tablets to become kiosk mode devices without minimum order quantity, thus helping enterprises to save costs.

IT staff can also change any device's settings and pre-

configure a volume of devices anytime, anywhere using the online platform. They can also restrict the use of device cameras, extend screen timeout, and rebrand the devices with company logo or animation on the booting screen, all butter-smooth remotely. The annual fee for the basic version is HK\$40 and HK\$80 for the premium per device. It suits enterprises that demand bulk deployment and configuration of mobile devices to workforce and brand promotion with the use of devices as kiosks.

KNOX Mobile Enrollment offers free-of-charge top-notch automatic device enrollment. This enables automatic Mobile Device Management (MDM) enrollment and skips numerous default steps, saving immense configuration time. Corporate staff members only need to connect their devices to a mobile or Wi-Fi network and the company's applications download automatically, eliminating the needs for staff to download, install or login. This reduces support from an enterprise's IT help desk, and greatly aids to control individual access rights to online company resources, thus ensuring security and removing the element of liability.

Mobile Device Management (MDM) solutions supporting the KNOX Mobile Enrollment solution include Air Watch, Blackberry, MobileIron, SOTI, etc., giving enterprises a range of choices.

Key features of Knox Configure

- Zero-touch configuration via cloud management platform
- Configure a bulk of Samsung Galaxy smartphones and tablets anytime, anywhere
- Capable to pre-configure devices out-of-the-box and change the settings by pushing updates
- Restrict device features or even lock down to kiosk mode to suit assigned usage
- Brand the devices with your company logos, animation, music in booting screen, wallpaper, etc.

Key features of Knox Mobile Enrollment

- Zero-touch automation and enforcement of MDM enrollment
- Work with major MDM solutions
