

# Smart IoT Construction

## A comprehensive platform to enhance management efficiency and safety in the workplace

This IoT platform works with a smart helmet that allow users to track worker's condition, including heart rate, body temperature, falling and standstill situation. Users are able to push pre-recorded audio messages to all or individual workers and track their location via the cloud-based management platform based on their needs. Anti-collision technology with accuracy up to the centimeter level is also available for the prevention of fatal accidents.

### Application

Construction Sites | Field Workforce | Railway Workers

Real time health condition monitoring

Falling and standstill detection and alerts

Cloud-based management platform

Avoid fatal collision and accidents
